

**How do we guarantee evidence-based medicine in a semi-state healthcare system?
A look at the situation of Turkish migrants in Austria**

Univ.-Prof. Dr. Margarethe Hochleitner

Turks make up the largest group of migrants in Austria.

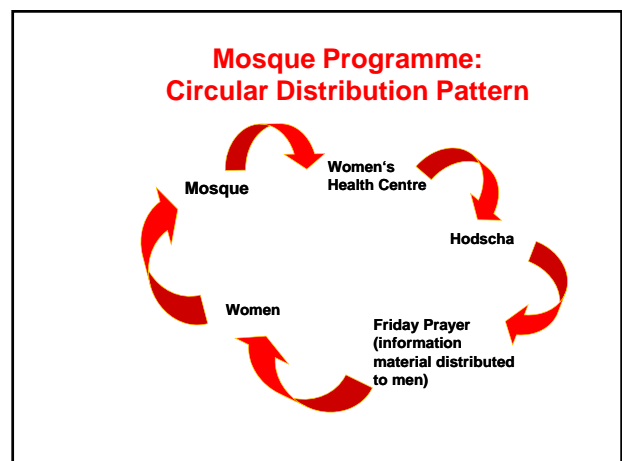

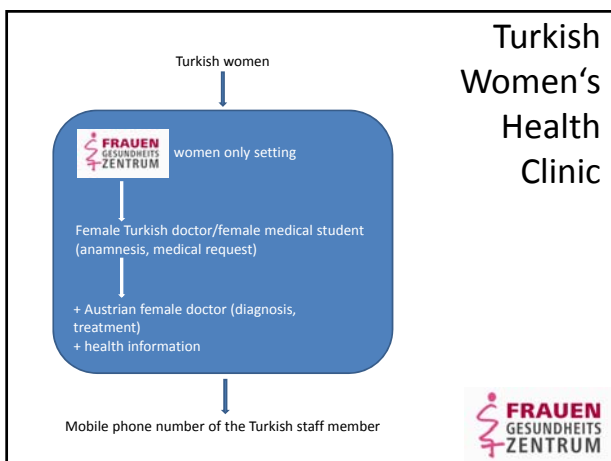

Our state healthcare system covers all Turkish migrants and guarantees evidence-based medicine.

SO WHAT?

Questionnaire on access to health care for immigrants*

Question	Yes	No
Did you go to your family doctor more often at home?	46.8%	53.2%
Did you go to the hospital more often?	31.8%	68.2%
Did you have more therapeutic offers at home?	61.0%	39.0%
Do you feel discriminated as compared to Austrians?	43.8%	56.2%
Would these problems be solved by having an interpreters service?	64.9%	39.1%
Do you feel you are treated the same as Austrians when accessing the healthcare system?	56.7%	43.3%

*study population: 912 participants (344 women, 568 men)
*study venue: Innsbruck University Hospital

GOÇMENLERE YÖNELİK SAĞLIK GÜNÜ

MESSUNG VON:
Blutdruck, Body Mass Index, Blutzucker und Cholesterin – Herz-Risiko?

MEASUREMENT OF
Blood pressure, Body Mass Index (BMI), blood glucose, and cholesterol - Cardiac risk?

TANSİYON,
beden kitle indeksi, kan şekeri ve kolesterol ölçülür. Kalp riski tespit edilir.

WIR ALLE SIND DATTI!

Our Turkish Women's Health Clinic is the best guarantee for evidence-based medicine of the highest standard for our female Turkish patients.

EVIDENCE-BASED MEDICINE

Everything okay?
No problems at all?
We see 2 main problems:

- interpreter
- parallel care

PROBLEMS

We are concerned that using an interpreter, even one of our trained staff, could cause medical quality to suffer. We ask ourselves how far parallel care inside the university hospital can go without a major loss of quality.

**INTERPRETER
PARALLEL CARE**

The optimal goal, which is not only medical but also social, is to ensure by social integration that female migrants can access mainstream medical offerings.

GOAL
